

ABSTRACT

A driving head for stirrer cans each comprising a small blade driven by a first shaft and cooperating with fingers for driving a second shaft of a stirrer located in a can. The fingers protrude from a plate engaged in a grip that is a part of a body having a general shape like a swan-neck which is arranged beneath a shelf. The body has an upper portion which is crossed through by the first shaft that carries and drives the small blade as well as means for preventing rotation of each stirrer can.
